Lab 1

1- True or False:

Why is Testing necessary?

1- because software is likely to have faults

2- To learn about the reliability of the software

3- To fill the time between the delivery of the software and the release date

4 To prove that the software has no faults

5- Because testing is included in the project plan

6- Because failures can be very expensive

7- To avoid being sued by customers

8- To stay in business

2- compare between :

1- functional and non-functional testing

2- black box, white box, and gray box

3- What is the SDLC?

4- What are the Testing levels?

5- What are the Testing Types?

6- [Bouns] search for the difference between TDD and DDD and BDD

7- Who does Testing?
